YSCT-16 YSCT-32 YSCT-64

YSCT-16/32/64 is equipped with a custom made Slip Ring manufactured by MOOG USA for the transmission of power, control signals and data. MOOG is a global company that specializes in designing and manufacturing precision slip rings. MOOG is the world's leader in slip ring manufacturing and offers more than 10,000 slip ring designs that are used in medical equipment ranging from large CT Scanners to smaller camera systems as well as rugged space and aircraft vehicles.

YSCT-16/32/64 uses a highly precision gantry rotary bearing that is manufactured by Franke GmbH located in Germany. Franke bearing designs are able to meet the rigorous requirements of military and aerospace applications.

Zero Tolerance: The design and integration of the rotate bearing, rotor casting and the rotor motor control subsystem are designed to have very tight tolerances and very smooth and repeatable operation that allows the system to produce superb image quality.

Zero Jitter: The rotate bearing implements a preload design that effectively eliminates any axial and radial run outs which effectively eliminates any jitter or vibrations.

The system has multiple temperature sensors that are monitored in real time to ensure that the gantry and detector cooling is working within the specified ranges and to eliminate any possible image artifacts that would be caused by having an unstable operating temperature or temp drift.

YSCT-16/32/64 System controls were designed and packaged to be in a single location on the gantry. This optimizes the cooling that is required for the components and provides a platform for meeting all of the shielding requirements for EMC. In addition the system controls packaging design allows for minimum space being needed for maintenance.

YSCT-16/32/64 has the fastest scanning speed among all the 16-slice CT systems with a scan speed of 0.5 s/360°. This not only gives you quicker patient throughput but also reduces any motion artifacts that would be due to any respiratory motion.

Tube

YSCT-16 uses an X-Ray tube that is manufactured by DUNLEE, USA. The X-ray tube is a very mature design and widely used which brings stability and long tube life. The tube has an anode heat storage of 5.3 MHU and an anode a cooling rate of 815 KHU/min which allows longer scan times and high patient throughput. The tube current range is 10~420 mA. The tube voltage range is 80~140 kV. The tube focal spot sizes are 0.7*1.2 mm for the small and 1.2*1.2 mm for the large.

Detector

The detector module design is non-isometric which consists of 16 slices by 24 rows. A detector row consists of 912 channels by 24 rows for a total of 21888 channels for the entire detector.

The detector design fully meets all of the EMC/EMI shielding requirements. The detector is also designed to prevent any light leaks. Meeting these requirements reduces the risk of having any noise that could introduce image artifacts. The detector mechanical design is very precise and robust and will ensure reliability during high-speed rotations of the gantry.

The detector design uses an optimized ultra-high speed rare earth ceramic scintillating material that increases the quantum efficiency detection. The material also has a very quick decay time and is less susceptible to radiation damage. This design ensures longer life and stability of the detector and can produce good image quality at a lower dose.

The unique compact ASIC chip allows the detector module to have a smaller overall package size. The ASIC has lower electronic noise, high sampling rates and has better detection performance at low contrast levels.

An innovative anti-scatter grid (ASG) with optimized tungsten plates are used in the YSCT16 system. The ASG design fully meets the Scatter to Primary Ratio (SPR). The ASG design implements a special process to maintain its stability and interface to the detector modules.

The detector is segregated from the heat generating sources in the gantry to reduce any temperature variations that the detector would be exposed to. This greatly improves the thermal stability and operating environment for the detector.

YSCT16 produces excellent image quality. Measuring the systems image quality using the industry standard CT CATPHAN Phantom the contrast resolution is 21.8 lp/cm at MTF 0%, 14 lp/cm at MTF 10% and a low contrast resolution of 3mm at 0.3%.

Imported LED cold light source is adopted, with the ultrathin optical lens.
 Digital means are adopted for stepless regulation of LED brightness.
 Light field size can be adjusted by the handle.
 The removable handle sheath can be disinfected.
 The service life of LED shadowless lamp is long (50,000h).
 Color temp can be adjusted in three steps.
 The imported switch power supply is adopted to control the voltage, making the work voltage permanently stable.
 The no welding titanium alloy arm, Imported spring arm make sure the lamp head adjusted easily and freely.

YSOCS-HP

Different from ordinary pressure oxygen machines, high pressure oxygen concentrators refer to the oxygen concentrating machines whose outlet pressures are in the range of 0.14-0.4Mpa.

1. Our high pressure oxygen concentrator adopts PSA (Pressure Swing Adsorption) technology to produce oxygen.
2. Capacity: 10L/15L/20L
3. This high pressure oxygen concentrating equipment is designed with low concentration alarm function and is configured with an audio and visual alarm system for high/low pressure.
4. For connecting with ventilator or anesthesia machine in ICU & surgical room.

YSOCS

Small centralized oxygen supply (0-20/30/40/50/60L/MIN))

1. Absolutely dry, clean and oil free
2. Small and light weight, easy and safe to operate
3. Simple, reliable and easy maintenance
4. High flexibility, it is movable, it supports oxygen for different quantity beds according to demands.
5. Energy saving, low power consumption
6. Cost-Effective

MAST is a fast, compact and versatile sterilizer which is researched and developed according to the latest requirements of medical institution and CSSD. It is designed and manufactured combines high capacity with cost-efficiency, while offering high operating reliability and easy maintenance.

The design of chamber accords with state GB1502011, GB8599-2008, and European EN285 standard.

Product features

I Superb chamber machining and welding process
The acid-proof stainless steel chamber and jacket are automatically robot-welded to guarantee long time and trouble-free operation.

I Nice chamber surface
Surface Smoothness, Ra≤0.5; No welding part or bolt in the chamber which effectively protects the items to be sterilized. Steam baffle plates are surrounded by silicon rubber protecting the chamber surface.

I Reliable and durable chamber
Chamber is designed according to professional analytical method. High-emulation software ANSYS is used for chamber simulation. Design service life: 10 years (or 20000 times sterilization)

I Reasonable sealing structure
Compact designed sealing groove, durable circular hollow silicon gasket, sealed by compressed air.

I Hanged door automatically
The door is driven by a motor automatically, stable and easy operation. Door concave-convex tooth structure ensures its safety and durability.

I Precise pressure detecting and control
Intelligent pressure transmitters, Wika (Germany), ensure steam pressure detecting and control both in Chamber and jacket.

I Unique vacuum noise-reduction system
LNS low-noise and water-saving vacuum system, effective reduced the noise during running.

I Humanized operation system
Colorful touch screen on loading-side, 6 indicating lamps on unloading sides, which are concise, vivid and exactly showing sterilization running status and alarming information.

I Reasonable pipeline layout
All the pipes, valves and components are designed and installed in single side, which is more convenience for repair and maintenance. The sterilizers can be installed against the wall and also, two sterilizers can use the same maintenance space to save installation space.

PS-100XP

PS-200X

PS-40X

SHINVA Plasma sterilizer takes H2O2 as sterilizing agent and form plasmatic state of H2O2 by electromagnetic field under low temperature. It combines both gaseous and plasmatic H2O2 to make sterilization for the items in chamber and decomposes the residual H2O2 after sterilization. It is widely used in CSSD or other medical institute for the sterilization of electric wire and cable, optical glasses and glass lens, power equipment and batteries, endoscopes, catheter, nonmetallic and other wet or heat sensitive instruments.

Main Features

1) Low temperature sterilization
The sterilization temperature is 50±5°C which is much lower than steam sterilization. It is dry sterilization that has no harm on instrument, so it extends the device's service life.

2) Safe and environment friendly
The matter after sterilization is water and oxygen molecule that have no toxic harm to staff or patient, and there is no need for drainage or air exhausting. High efficient H2O2 filter is installed in the exhausting outlet to guarantee no H2O2 pollution to the environment.

3) Time-saving and cost-efficient
Rectangular chamber has greater capacity, high efficiency and short sterilizing cycle (≤50mins). The sterilized articles can be used directly without extra processing. It can increase the instrument turnover and decrease the storage of precious instrument to cut cost indirectly.

4) Convenient
Only power supply is needed for installation. The system adopts man-machine control interface with intelligent program design. Equipped with foot switch (alternative) and integrated biological incubator (alternative).

5) Multiple models
The door structure of the sterilizer is customizable (single or double door). To meet pharmaceutical factory needs, chamber material can be stainless steel.

6) Reliable sterilization
The chamber adopts alloy material which has good thermal conductivity to guarantee a stable temperature in the chamber. The purification system makes the H2O2 diffuses uniformly. The low temperature storage system provides a stable concentration of H2O2.

7) Safe sealing door
The sterilizer adopts mandril-driving auto overhead door with reliable sealing function and safe lock device to guarantee personal safety.

8) Data management
The 2048M storage (alternative) can store original data for inquiring. Mini printer can be used to print operation data timely. There are two types of record methods to guarantee the data is 100% acquirable.

9) Advanced configuration
The vacuum pump, controller, pressure transmitter and other key components are world famous brand. The sterilizer equipped with multiple programs and bar code identification system (alternative).

10) Reassuring
We provide comprehensive operation training materials to key components maintenance intelligent reminding system for your convenience.

Scope of application

The sterilizer is applicable to sterilize the medical instruments that are thermolabile or non-moisture-tight. It is not applicable to the sterilization of liquid, powder or cotton fabrics. All the medical instruments that meet the following conditions can be processed by this sterilizer.

PS-100:

- 1) Metal tubular instrument: inner diameter ≥1mm; length ≤500mm
- 2) Nonmetal tubular instrument: inner diameter ≥1mm; length ≤2000mm

PS-200:

- 1) Metal tubular instrument: inner diameter ≥0.8mm; length ≤300mm
- 2) Nonmetal tubular instrument: inner diameter ≥1mm; length ≤1000mm

Alternative Configuration

- 1) USB flash disk storage
Timely sterilizing information storage to guarantee all data can be safely stored and traced during the sterilizer service life. This configuration can also be updated to traceability system.
- 2) Integrated biological incubator
The biological incubator will timely display temperature and incubate time. It equipped with independent control system that could work in the case of the sterilizer switched off.
- 3) Foot switch
Simply kick the switch to open or close the door.
- 4) Alloy storage rack
The alloy storage rack realizes that sterilized articles can be separately stored.
- 5) Metallic sterilizing container
To improve sterilizing result, we provide various sterilizing container for different kinds of instruments and operation kits.
- 6) Auto elevating trolley
The trolley equipped with auto elevating platform, chargeable lithium battery. The convenient memory function could record three different positions.
